1.– What is internet?

2.– Things that you can do thought Internet

2.1.– Chat Rooms (mIRC, ole chat, etc....)

2.2., Navigator

2.3.– MP3 : Internet audio format

2.4.– ICQ

2.5.–Electronic mail

2.6.–Real player

3.– Webs'pages

3.1.– Pages more visited

3.2.– Searchers

4.– Conclusion

1.– What is Internet

Internet is an universal net, where you can do a lot of things that I will be explain in the next point. Internet is not a phisic place or thing, Internet is a net composted with a lot of servers that achieve that the users can access to the web pages only connecting to phone line.

2.– Things that you can do thought Internet

2.1.– Chat Rooms (mIRC, ole chat, etc....)

In Internet there is a lot of differents chat rooms, you can access to these rooms with a program called mIRC in these program you only have to connected to a server enter ina a chat room an start to talk with the people connected in these moment in the same chat room as you.. But you can talk in a chat room without mIRC, in alot of web pages there is a section called chat and in these section you can talk with other peolpe, but in these kinds of chats you only can talk in one chat room because you do not are connected to a server you only executed a option of the web a n normally these webs pages only has one chat room, one of most popular web page chat is olechat in these chat you can talk in differents chat rooms.

2.2., Navigator

To surt the net we have two navigator princi parly: Microsoft explorer and Netscape Navigator.

Microsoft Internet explorer is the most pupolar navigator with its you can visit a lot of webs and these program have a special plugin to visit webs with differents java code and with Flash, etc.... And the basic

functions are: add a web's direction to a favourite folder, consult the pages that you had visited the sessions before.

Netscape Navigator: moreless is the same as the explorer the difference is that netscape is a free software, and it wants to compit with microsoft explorer .

2.3.– MP3 : Internet audio format

The most popular audio format in internet is MP3, these format is like the CD format but in a computer, you can pass the wav format that is the CD's format with only using an encoder to a MP3 format these format achive a very good quality of sound in a computer. Nowadays these format is only for a peolpe that want to listen a song and if they really like buy the CD, but a lot of peolpe do a illegal thing that is to achieve MP3 songs and save it in computer these are forviden you can only have it 24 hours after these time you have to delete the song of tour computer. The player that a lot of people used to listen MP3 songs is Winamp, that you can achieve in internet, is a free software. (<http://www.winamp.com/>)

2.4.– ICQ

ICQ is a very usefull program all the users of these program have a number an the people can send to them all the things: sounds, files, data, images, etc... It is like a chat room but if you are not connected in the moment that a person send you something you can read the text or recupere this thing later when you connected to ICQ. (<http://www.icq.com/>)

2.5.–Electronic mail

I only said about E–mail that is more usefull and efficiency that post mail.

2.6.–Real player

Real player is a usefull tool of Internet is a free softaware and whit it oyu can see TV online or listen radio online you only have to achieve a radio or TV link a you can see or listen it in your computer like if you see or listen a conventional radio or TV station or channel,. Realplayer normally is a plugin of Inyternet explorer and explorer use it when there are some videos os sounds to execute. (<http://www.realplayer.com/>)

3.– Webs' pages

3.1.– Visited more pages

There are a different kinds of web pages but peolpe normally visit the MP3 pages where you can achieve a lot of illegal MP3 songs and you can listen it and you do not have to buy the CD you only have to dowload these songs and listen it with a MP3 player like Winamp. Other pages that people visted are the personal pages these are the pages that the people do it to explain something to offer a service or only to explain things about themselves.

3.2.– Searchers

There is a lot of searchers in Internet where you only write a word an it looks for the pages that contains these word, the most popular spanish searcher is Olé and there are spanish web pages, the most usefull and important searcher for me is Altavista these searcher look for web pages in the language that you want and have a option that permit you to translate the web page into your language, Alatavista is the searcher that have more pages in their files, allows millions and millions of web pages of the all subjets.

4.- Conclusion

I chose this subject because I think that the Internet is still in its beginnings and it has an important future in communications. Nowadays I consider it to be the most useful tool, to search information and to communicate with people around the world.
